

Software Project Management-506

Semester 6th

Name: _____

Roll Number: _____

Computer Science Department
University Of Karachi

University Of Karachi

Lab-04: Hands-On Activities for Organizational Structure in Software Project Management

Objective: Objective:

To enable students to understand and analyze different organizational structures (Functional, Project-Based, Matrix, and Hybrid) in the context of software project management and identify how these structures affect project outcomes, team dynamics, and decision-making processes.

Apparatus:

Hardware Requirement

Personal computer, **Laptops or tablets:** For accessing project management tools or templates

Software Requirement

Internet access: For research and collaboration.

Activity Description:

Students will work in individually to explore and evaluate different organizational structures by analyzing real-world or hypothetical case studies of software projects. They will assess the strengths, weaknesses, and overall suitability of each structure in various project environments and present their findings.

Activity Instructions: For Each Case Study Given Below

1. Analysis:

- Identify the key elements of the selected organizational structure as used in this case study.
- Discuss the advantages and disadvantages of using the selected structure in the CloudConnect project.
- How did the selected structure impact the success or failure of the project?

2. Comparison:

- Compare selected structure with other organizational structures discussed in the lecture (e.g., functional, project-based, matrix).
- Would a different structure not selected have been more effective for this project? Why or why not?

3. Group Discussion:

- Present your analysis to the class and engage in a discussion about the effectiveness of matrix structures in large software projects.

Case Study 1:

Project Name: CloudConnect – Cloud-Based Service Development for Global Enterprises

Company: XYZ Technologies

Project Overview: XYZ Technologies, a global IT services company, was tasked with developing a cloud-based service called **CloudConnect** to provide scalable, secure, and cost-effective data storage solutions for enterprise clients. The project required extensive collaboration across multiple departments, including software development, security, networking, and customer support. Given the large scale and complexity of the project, XYZ Technologies implemented a **suitable organizational structure** with reason to manage resources and expertise effectively.

Case Study 2:

Company: FinTech Innovations

Project Overview: FinTech Innovations, a medium-sized financial technology company, was tasked with developing a **financial management software** called **FinancePro** for small and medium-sized enterprises (SMEs). The software aimed to automate accounting tasks, manage payroll, and provide financial analytics for businesses with minimal financial expertise. Given the nature of the company and the project, FinTech Innovations decided to utilize a **selected organizational structure** to manage the project development.

Case Study 3:

Project Name: MedTech Portal – Cloud-Based Healthcare Management System

Company: HealthPro Solutions

Project Overview: HealthPro Solutions, a leading healthcare software company, was tasked with developing **MedTech Portal**, a cloud-based healthcare management system designed to streamline patient management, appointment scheduling, and electronic medical records (EMR) for hospitals. Given the high complexity, tight deadlines, and the need for a focused, cross-functional team, **HealthPro Solutions adopted a selected organizational structure** for this software development project.
