

ReceiptLedger — Division of Work

SPM-458 | Draft for team discussion | 3-week sprint plan

Purpose

Six roles are proposed below, grouped by what the project needs rather than by person. The final column is intentionally blank and will be filled in during the team call.

Proposed Roles

Role	Responsibilities	Why it matters	Assigned To
1. Lead Architect & Core Backend	- FastAPI backend and API contracts - OpenCV preprocessing and dual-OCR pipeline - Normalization, dedup, system integration - Hosting / tunnel for live testing	Heaviest technical load and the critical path; everything else depends on this working.	Asad
2. SPM & Operations Co-Lead	- Jira board, sprints, story points, burndown - Standups, risk register, SoW tracking - Final report and presentation compilation	Course paperwork and Jira are graded; offloads admin from the Lead.	Arish
3. QA, Testing & Acceptance	- Run OCR output against ground truth - Compute accuracy against SoW criteria - Bug tickets, UAT, regression on edge cases	SoW has strict measurable targets that must be proven.	Aun
4. Web Dashboard Developer	- React + Vite dashboard views - Monthly totals, category chart, trends - Review Queue interface	Well-defined work built on standard libraries against agreed API contracts.	Iman
5. UI/UX Designer (Google Stitch)	- Mockups for mobile capture and dashboard - Colour palette and basic design system - Graphics and screens for slides and README	Gives dashboard and mobile work a clear visual target.	Aazmeer
6. Data Collection & Ground Truth	- Collect printed and handwritten receipts - Transcribe ground-truth spreadsheet - Add local item terms to the dictionary	OCR cannot be tested or tuned without real, labelled data.	Zainab

Suggested Working Pairs

Pairing keeps members from blocking each other: one side defines or supplies, the other builds or verifies.

Pair	Roles	How they work together
Stream A	Backend ↔ Web Dashboard	Backend defines the JSON API contract; dashboard is built against mock data until the live API is ready.
Stream B	Data Collection ↔ QA	Data supplies receipts and ground truth; QA measures accuracy against the SoW targets.
Stream C	UI/UX Design ↔ SPM Co-Lead	Designer supplies screens and diagrams; SPM Co-Lead uses them in Jira, the report and slides.

To Decide on the Call

- Who takes each role (fill in the Assigned To column).
- Whether any role needs a backup owner.
- Daily standup time and where updates are posted.
